Web Technologies Project

Instructor : Mohammad Ghattas

Project Title: E-Commerce Website for Perfume Store

Objective

The goal of this project is for students to develop a e-commerce website using front-end web technologies. The website will have:

1. A homepage showcasing a variety of perfumes.
2. A product page that dynamically loads perfume data using **jQuery**, **AJAX**, and **JSON** from a placeholder API.
3. An "About Us" page to provide information about the store's mission and values.
4. A "Contact Us" page featuring a form for user inquiries.

Students will apply their knowledge of **HTML**, **CSS**, **JavaScript**, **jQuery**, **AJAX**, and **JSON** to design and implement the website.

Guidelines for the Project

1. Homepage Design:

- Create a visually appealing homepage for the perfume store.
- Include the following:
 - A header with the website name and navigation menu.
 - A section displaying featured perfumes (static content for the homepage).
 - Footer with basic contact information or social media links.

2. Dynamic Product Page:

- Design a "Products" page where perfume items are displayed dynamically.
- Use **jQuery**, **AJAX**, and **JSON** to fetch perfume data from a placeholder JSON link (e.g., JSONPlaceholder).
- Display fetched data in a grid or list format, showing:
 - Perfume name.
 - Description.
 - Price.
 - Image (use placeholder images if real ones are unavailable).

3. About Us Page:

- Provide information about the store's background, mission, and values.
- Include visually appealing design elements with a consistent layout.

4. Contact Us Page:

- Create a form for user inquiries with fields for name, email, and message.
- Implement form validation (First name, Last name, Mobile, Address, age, Hobbies, Country) and confirmation messages using JavaScript.

5. Design Requirements:

- Use **HTML** and **CSS** for layout and styling.
- Use **JavaScript** for client-side interaction and functionality.
- Implement **jQuery** for easier DOM manipulation and AJAX calls.
- Ensure proper usage of **AJAX** to fetch JSON data and dynamically update the product page.

6. Another Features:

- Add a search bar to filter products by name.
- Include a shopping cart section where users can "add to cart."

7. Media Query

- Use responsive design to ensure the website works on mobile and desktop devices.

Evaluation Criteria

The project will be graded out of 20 points, distributed as follows:

Evaluation Criteria	Description	Points
Project Concept and Design	Clear and logical project flow with distinct pages (Home, Products, About Us).	2
Technical Execution (AJAX, JSON, jQuery)	Proper implementation of AJAX, JSON, and jQuery for dynamic content loading and form validation.	5
Home Page Design	Effective use of design elements for the homepage, user-friendly navigation.	2
Products Page Design	Well-organized product listings with proper use of images, descriptions, and AJAX loading of products.	3
About Us Page Design	A clear, engaging About Us page with a well-designed layout and content presentation.	2
Form Validation	Correct implementation of form validation using JavaScript, with error handling.	3
Styling and Responsiveness	Responsive design, consistent styling with CSS, use of color schemes, typography, and visual hierarchy.	3

Student Instructions

1. Start by planning the website structure (homepage and product page).
2. Write HTML and CSS to design the layout and style of the website.
3. Use JavaScript and jQuery to add dynamic functionality.
4. Fetch JSON data using AJAX and display it on the product page.
5. Test your website for errors and ensure all features work as expected.

Project Submission Deadline and Presentation Deadline:

- This project is expected to be completed 27-12-2024
- Projects must be submitted in a zipped folder containing all files on eclass
- Projects must be submitted in GitHub.
